### **REASONS FOR ALLOWANCE**

The instant invention is deemed to be directed to an unobvious improvement over the invention patented in U. S. Patent No. 4,949,821 to Murota et al. The improvement comprises a stator support shaft with a first internal circumferential oil seal groove positioned in the internal axial bore of the rearward portion, the first oil seal groove constructed and arranged to receive a first oil seal for establishing a sealing engagement between the stator support shaft and the input shaft and for blocking an axial flow of oil between the stator support shaft and the input shaft originating from the torque converter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### **PRIOR ART**

The patent to Murota et al. is cited for the showing of a stator support shaft similar to applicant's but lacking the internal circumferential oil seal groove.

#### ***Prior Art***

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consists of two patents.

Koyama (4,974,715) is cited to show an automatic transmission with stator support shaft.

Art Unit: 3745

Glocke et al. is cited to show an automatic transmission with a pump shaft having an internal oil seal groove..
